JCR Organizes API Plant Tour for Local Residents

JCR Pharmaceuticals Co., Ltd. (TSE 4552: Chairman and President Shin Ashida, "JCR") held its first plant tour for neighborhood residents on June 29 at the Kobe Science Park Center ("KSPC") in Nishi-ku, Kobe City. The tour aimed at providing local residents with a better understanding of the company's business activities.

Presentation on company profile and production facilities

Plant Tour

KSPC is our newest API plant, completed in November 2022. Approximately 40 neighborhood residents, including elementary school students, participated in the tour.

After a presentation on rare diseases, which is our focus area, and the manufacturing process of biopharmaceuticals, the participants were given a tour of the plant. Anticipants shared impressions and thoughts after the tour, such as "I learned a lot about rare diseases," and "I was impressed by the kinds of products that are manufactured in this large plant near my house."

We aim to be a company with favorable and closer relationships with the local communities and will continue to meet the challenge of delivering pharmaceuticals that only JCR can provide.

For more information about KSPC, please visit the link below.
