The HKTDC Hong Kong International Lighting Fair is one of the largest exhibitions in the lighting fixture industry, attracting more than 20,700 visitors and 2,600 exhibitors in 2023. Last year JDI exhibited LumiFree, the one and only lighting control device using liquid crystal panels, which has been received favorable reviews from many lighting fixture manufacturers.

This year's JDI LumiFree exhibition will feature the first international demonstration of a full-color light source combined with LumiFree. In addition, JDI will showcase large-sized LumiFree products scheduled for mass production in December, introducing LumiFree to global lighting manufacturers and proposing new possibilities for lighting using LumiFree's unique light distribution control technology.

JDI is committed to providing further value to society through JDI's unique technologies such as the customizable light distribution control provided by LumiFree.
